

Heidi Dragomir

.NET Developer / Fullstack Developer

heididragomir@gmail.com | 0707 96 96 26 | LinkedIn | Portfolio | Github

PROFILE

.NET developer with experience in backend development, API integrations, and agile teamwork on client-facing projects. Has worked with microservices, containerization, and CI/CD pipelines, and has driven personal projects with a focus on stability, observability, and maintainability. Thrives in environments where technology and business value are closely connected, and gladly takes ownership of the whole picture, from the database layer to the API interface.

I'm open to exciting new opportunities throughout the country and would happily consider relocating for the right challenge.

WORK EXPERIENCE

Co-owner / Fullstack Developer

Jul 2023 - Present

Bidstacker

Remote

Led product development and system management in a startup environment with broad responsibility.

- Developed and enhanced features in Next.js and Node.js/Express for a live, actively running web platform.
- Implemented the Two payment solution and improved payment flows for increased stability and a clearer user experience.
- Designed and developed backend APIs for integration between frontend, database, and external services.
- Improved state management and data handling by introducing Zustand and React Query.
- Built form validation and messaging functionality with a focus on usability and structure.
- Worked continuously with Git-based workflows, code improvements, and agile development in close collaboration with other developers.

Tech stack: *React/Next.js, JavaScript, Node.js/Express, MongoDB, CSS/Tailwind, Git, GitHub, Agilt/Scrum*

.NET Developer - Internship

Nov 2025 - Jun 2026

Advacy

Jönköping

Part of an agile development team, contributing to the continued development of internal systems across two client projects built on a microservices architecture.

- Continued development of an internal planning system built on a microservices architecture for a client project.
- Developed APIs in ASP.NET Core and integrated backend solutions with an Angular-based interface.
- Structured and further developed databases in SQL Server using EF Core and T-SQL.
- Implemented functionality for filtering, grouping, and calendar management in business-critical systems.
- Actively participated in pair programming, code review, and technical discussions within an agile team.
- Focused on code quality, clear structure, and solutions that were easy to extend and maintain.

Tech stack: *C#, .NET, ASP.NET Core, MediatR, CQRS, MS SQL, T-SQL, Clean Architecture, Microservices, Angular, Blazor, JavaScript/TypeScript, CSS/Tailwind, Git, Azure DevOps, Agilt/Scrum*

Fullstack Developer - Internship

Nov 2022 - Jun 2023

Bidstacker

Stockholm

Progressed from student to active contributor within a product team. Built features in a live codebase while deepening knowledge of the React ecosystem.

- Developed and maintained functionality in existing systems with a focus on stability and continued development.
- Designed database systems and backend logic for web-based solutions.
- Deepened work with API development in Node.js and database management in MongoDB.

- Worked in an agile development environment with version control in Git and continuous delivery of new features.

Tech stack: *React/Next.js, JavaScript, Node.js/Express, MongoDB, CSS/Tailwind, Git*

Project Manager - EU Official Journal

2015 - Feb 2019

DocEssensis SRL

Romania

- Planned and coordinated deliveries with high requirements for quality, structure, and accuracy.
- Ensured that deadlines and quality requirements were met in complex, detail-driven workflows.
- Managed communication, prioritization, and problem-solving across multiple stakeholders and workflows simultaneously.

EDUCATION

Web Developer .NET

2024 - Jun 2026

Jönköping University

Jönköping

Fullstack Web Developer

2021 - 2023

Chas Academy

Stockholm

Faculty of Geography

1997 - 2001

"Babeş-Bolyai" University

Romania

TECHNICAL SKILLS

Backend: C#, .NET, ASP.NET Core, Node.js/Express, PHP, REST API-utveckling, EF Core, MediatR, CQRS

Architecture: Microservices, Clean Architecture, distributed systems, Domain Driven Design (DDD), n-tier architecture (layered architecture), API Gateway (Ocelot)

Databases: MS SQL, T-SQL, MongoDB, MySQL, SQLite, PostgreSQL

Frontend: React, Next.js, JavaScript, TypeScript, Angular, Blazor (basic knowledge), TailwindCSS

Cloud & DevOps: Azure, Azure DevOps, Docker, CI/CD, GitHub Actions, Git, Bash, GitHub

AI: AI integrations via OpenAI API, Claude Code, Codex, Copilot, Gemini

Other: Linux (basic knowledge), Test-Driven Development (TDD), unit testing, SignalR/WebSocket, Agile development, Scrum, pair programming, code review

SELECTED PROJECTS

Alert Management API

2026

Backend project built in ASP.NET Core, focused on operability, system monitoring, and stable integration.

- Built a REST API in ASP.NET Core with a clear layered structure and separated business logic.
- Implemented real-time communication with SignalR for event-driven updates.
- Developed health checks, metrics, and structured logging for monitoring and operational tracking.
- Integrated Prometheus-compatible metrics and Grafana-adapted logging via Serilog.
- Containerized the application with Docker and automated database startup and migrations.
- Implemented business rules at both the application and database layers to increase data integrity.
- Documented technical structure and design decisions to support future development and maintenance.

Tech stack: *C#, .NET, ASP.NET Core, PostgreSQL, EF Core, Docker, SignalR, Serilog, Prometheus, Ocelot*

Additional projects available on GitHub.
